Your Water in the last 24 hours...

Before Water Filter

- Lead 0.79%
- Chromium 6 2.56%
- Fluoride 0.32%
- Bacteria 0.66%
- Mercury 0.12%
- Other Chemicals 4.86%

why should i use a filter system?

using a filter system ensures cleaner, safer, and better-tasting water by removing impurities and contaminants.

how often do i need to change my filter?

it's advisable to change filters every 3 months for optimal performance.

do water filters remove minerals essential for health?

water filters can remove some minerals from water, but they don't eliminate essential minerals crucial for health. using a water filter can enhance health by removing potentially harmful contaminants, ensuring cleaner and safer drinking water.

what is WQI?

WQI stands for water quality index, which summarizes water quality in a single value based on a scale of 1-100. if the WQI is high, it indicates a better water quality.
